### **Introduction:**

The “Customer Relationship Management System” is designed to optimize and enhance customer relationship management. Our website allows users to buy and sell products to different companies and make deals. This is a user friendly website where it allows users to use this website without any complexities. This “Customer Relationship Management System” project aims for easier management with customers and companies. CRM empowers business to build stronger customer relationships, increase sales, and improve all

over productivity. Whether a business is small or large enterprise, our customizable and secure CRM solution is tailored to meet user's unique needs and drive their business success. It is a secure website for user's personal information. It generates detailed reports on various aspects of sales, marketing and customer service.

### Objectives:

1. Develop a platform for companies to buy and sell products.
2. Stores and organizes information about customers, leads, and prospects.
3. Detailed profiles of customers which include personal information, communication, purchase history.
4. Visualizes the stages of the sales process, helping sales teams track progress and manage deals.
5. Allows customer's or companies to delete a deal if not needed.
6. Generates reports on various aspects of sales, marketing.
7. Ensures customer data is protected through encryption, access controls.

### Flowchart:

#### Frontend flowchart:

#### Backend flowchart:

## RESULT:

## FRONTEND:

- HTML
- CSS
- JAVASCRIPT

## LANDING PAGE:

This page is created by using HTML for the “GET STARTED” button. Then we used CSS to style it. Here’s how this page looks like:

## Signup page:

A dark-themed 'Sign Up' form with a title, three input fields for Username, Password, and Password confirmation, a 'Sign Up' button, and a link to the login page.

Sign Up

Username

Password

Password confirmation

Sign Up

Have an account? [Login](#)

Login page:

A dark-themed 'Login' form with a title, two input fields for Username and Password, a 'Login' button, and a link to the sign up page.

Don't have an account? [Sign Up](#)

Homepage:

In here users can make deals. There are different rows for making deals.

Deal making:

A screenshot showing a form for creating a new deal. The form is titled 'Sample Task' and has a '+ Quick Deal' button. It contains several input fields: 'Name', 'Deal', 'Amount and Currency', 'Client Contact', 'Contact Name', 'Phone', 'Email Address', and 'Company Name'. Each field has a corresponding input box. At the bottom of the form, there is a green 'Save' button. The form is part of a larger interface with a sidebar on the left containing 'Tasks and Projects' and 'CRM' sections.

Here users can make a deal and save it also cancel the deal if they want:

The screenshot shows a CRM interface with a sidebar on the left containing 'Tasks and Projects' and 'CRM'. The main area displays a 'Sample Task' form with the following fields and values:

| Field               | Value                  |
|---------------------|------------------------|
| Name                | Muskan                 |
| Deal                | ABC XYZ                |
| Amount and Currency | 5000 \$                |
| Client Contact      |                        |
| Contact Name        | Muskan                 |
| Phone               | 012345678123           |
| Email Address       | jnmuskanazan@gmail.com |
| Company Name        | XYZ                    |

At the bottom of the form, there are 'Save' and 'Cancel' buttons. A curved arrow points from the 'Save' button to the next screenshot.

After saving the deal it will look like this:

The screenshot shows the CRM interface after saving the deal. The 'Sample Task' form is now empty, and the 'Deal' field shows 'Muskan, ABC XYZ, 5000 \$' with a 'Delete' button. The 'Amount and Currency' field shows 'tanha, DFG, 300 \$' with a 'Delete' button. The 'Client Contact' field shows 'Sample Task' with a '+ Quick Deal' button. The sidebar on the left remains the same.

## Backend:

- Python
- Django
- Mysql

In backend we save data of the users and also the deal id, deal making time etc are stored in mysql. By connecting the Django server with mysql, all the data and information are stored and secured.

## Conclusion:

This website is made for companies and related customers. By the help of this website marketing, selling, business becomes easy and approachable. The companies and customers both are beneficial and maintains a relationship between customers. Secure data management and easy work process makes this website a business success. It is designed to empower business by centralizing all customer interactions, streamlining sales process and enhancing marketing efforts. It maintains detailed database of customers. It also tracks sales opportunities with accuracy.
